

New to Teaching Maths in Year 5

Hosted by St Anne's Catholic Primary School, Keighley

Led by Sharon Day

2020 – 2021

This course is aimed at NQTs and RQTs but other teachers moving year groups would also benefit. It is created as three progressive sessions during the first half of the academic year in order to build on successes and address challenges.

Gaps, misunderstandings and misconceptions need to be addressed at every stage and we need to ensure that the children **learn** the content of every year group and not just 'cover it'.

The aim of this course is to equip teachers in year 5 with how to:

- understand the key aspects in their maths curriculum
- understand progression and how to deliver their year group's subject content in depth
- make natural links within and between different mathematical domains as well as across other National Curriculum subjects to ensure that learning is meaningful and memorable
- observe and assess age-related expectations ensuring that children are on track
- recognise and address common (and not so common) misunderstandings and misconceptions for their year group
